#### ABSTRACT

Extension toward the particular aspects of change in 4-H programs is reported on. This study grew from the need to identify counties where the various types of new program expansion would be favorably viewed in the early developmental stages. A questionnaire was mailed to 1,045 county leaders, with followup letters later. The questionnaire was based on interest in various types of expansion, including adult programs. It was found that the attitude toward an exchange of work in the youth program is highly favored by county leaders. Also, over half of the county leaders actively favored expanding the youth program. # ATTITUDES OF COUNTY LEADERS TOWARD EXPANDING YOUTH PROGRAMS IN EXTENSION: MINNESOTA EXPANSION STUDY II

Howard J. Newell, Charles E. Ramsey, Duane A. Wilson

"Children now love luxury. They have bad manners, contempt for authority. They show disrespect for elders, and love to chatter in places of exercise. Children are now tyrants, not the servants of their households." This quote is not from a current criticism of modern American youth, although it might well be. These words were from Socrates, describing the youth of ancient Athens before the time of Christ. Indeed, throughout history, we find the criticism of youth consisting of much the same theme--disrespectful, lazy, and irresponsible.

Perhaps the only distinctive feature of the modern concern with youth is the greater dependence placed upon institutions other than the family in helping children become adults. The school has taken over most of the waking hours of youth, especially since school-assigned homework captures much of the time spent at home. Peers are also extremely important in determining youth's interests and values. Scouting, 4-H, and similar organizations occupy many hours of those youth who find the meetings an arena for peer association and interesting activity.

Thus, we find that adults today are as critical of youth as they ever were, but on the other hand we find a preoccupation with "programing" for youth development.

The 4-H movement has not escaped the pressure to provide ever-increasing scope and intensity in programing for youth development. Suggestions for expanded youth programs have come from within the Extension organization as well as from persons not directly connected with Extension.

The proposals for expansion in 4-H have taken many directions, but those now being most seriously discussed and tried in some counties in the United States deal with changes in content, method, and audience.

Changes in content came first. New projects, such as career choice, motors, and bicycle clubs were added to the traditional agricultural and homemaking program content. Old projects were sometimes given a different slant. For example, added to parliamentary procedure and demonstration in the junior leadership project was such supporting subject matter as self-understanding and group dynamics.

Changes in method have long been discussed, but, with few exceptions, tried only recently. Experts on youth development have seriously questioned traditional methods, such as competition and ribbons, completing records, and exhibiting; but essentially the methods have withstood these attacks. The appointment of a teenager as the club leader has been tried in a few counties in

some states. More recently, shorter projects have been tried in several pilot counties, with the yearlong requirement reduced to only a few meetings, mainly in the summer.

Changes in audience or clientele have, in some counties, become an accomplished fact. Urban and village youth are being reached in fairly large numbers. Another proposal has been made to lower the club membership age to include 7- and 8-year-old youth. Greater emphasis on programs for teenagers has also been suggested since there is a heavy dropout at the beginning of the teen years.

#### THE RESEARCH PROBLEM

This special report tells of a study of attitudes of various leaders in Extension toward the particular aspects of change in 4-H programs discussed here. Specifically the study concerns various types of content in short term projects, selected methods to be used in handling these projects, and a general question of new clientele and new emphasis with teenagers.

#### BACKGROUND OF THE PROBLEM

In Minnesota, community 4-H Clubs consist of boys and girls from ages 9 to 19, living in a community or area of a particular county. The club can develop an achievement program by fulfilling requirements for a National 4-H Charter received: when the group has at least five members enrolled in a project, an organization with the necessary officers, one or more local leaders, and a constitution and bylaws. An achievement seal can be added each year if the club holds at least nine regular meetings, has a local achievement day, picnic, camp or tour; has representation at a county achievement day or county fair; and one project completion by at least 85 percent of its members. The traditional approach to 4-H in Minnesota has been that members from age 9-19, belong to a community 4-H Club, and enroll in one or more of the approved projects. The 4-H year is from October 1 through September 30. There is emphasis on enrollment during October and November, although a club member can enroll as late as May 1. The members enroll in one of the approved projects and keep a record of their work for a stated period of time. Members are strongly urged to keep these records; some clubs require completion of records as a criterion for reenrollment. Members are urged to participate in all activities, such as exhibiting or demonstrating at the county fair or county achievement day. Members competing are eligible for many county, state, and national awards.

In recent years many people have suggested the Extension Service expand youth programs. It is said these educational programs should be developed to meet the needs of a new and larger youth clientele. One way to expand would be with short term projects. The teaching time is indefinite, but is usually shorter than the traditional 4-H Club year. For example, the project may call for 10 hours of instruction, or may be organized for one meeting a week for a few weeks. The project might also be organized for any number of meetings, 4, 8, or 12, over 2-3 months. Projects are most often made available during the summer months, but they can be offered any time.

Participants in this educational program may or may not be members of an organized community 4-H Club. Perhaps their group is interested in a particular subject. For this program the members may be asked to keep a 4-H record. In Minnesota, members of short term projects are considered to be 4-H members even though they do not participate in the traditional awards program.

In December 1965, a pilot project involving short term projects and called 4-H Operation Expansion was introduced in 21 counties in six states. Beltrami, Dakota, and Redwood counties were involved in this project in Minnesota. The major purpose of 4-H Operation Expansion was to demonstrate how a larger number of boys and girls can be reached through Extension 4-H with the present staff. Specific objectives selected were (1) to increase the number of youth contacted through 4-H programs; (2) to develop new approaches to conducting 4-H programs; (3) to contact more youth without increasing agent time or staff; (4) to revise the structure of the traditional 4-H program; and (5) to cut time spent by the agents on administrative details.

Suggestions for this change of programing and organization of youth work in the Extension Service came from many sources. Nationwide, some counties had already used one or more of the methods suggested in Operation Expansion to reach 4-H goals and objectives. Legislators and other leaders were asking the Extension Service to expand and change to reach a larger number of youth and make programs available to urban and nonfarm youth. Ultimately, the development of the pilot project became the responsibility of the 4-H Department of the Federal Extension Service.

Following are some examples of short term projects used in the three counties participating in Minnesota:

<u>Beltrami</u>

Dakota

#### THE POPULATION OF THE STUDY

This study grew from the need to identify counties where the various types of new program expansion would be viewed favorably in the early developmental stages. Since much of the planning is done on the county level, there is no demand for unformity statewide. Therefore, it was thought important to determine the attitudes of county leaders toward various types of expansion. For state planning, a sample of leaders would have been sufficient, but for county planning it was necessary to obtain data from all county leaders in the state who are officially responsible for the approval of Extension budgets and programs.

County leaders in this study include all members of the County Board of Commissioners, the County Auditor, and all appointed members of the Extension Committee. An interview would have been ideal in eliciting qualifying statements, but the large number of county leaders made this research tool prohibitive in cost. Instead, a questionnaire was mailed to each of the 1,045 county leaders defined here, with followup letters later. The response to the questionnaire was unusually high, compared with other studies employing the mailed questionnaire: 968 of the county leaders returned a completed questionnaire making the response rate 92.7 percent.

#### THE QUESTIONNAIRE

The development of the questionnaire was based on the interest in various types of expansion, including adult programs. The section of the questionnaire devoted to expansion in youth programs included questions on changes in the 4-H program which were discussed in the early paragraphs of this special report. Questions on short term projects, various methods of recognition such as trips, awards, and completion, new emphases in age and residence groups, and attitudes toward coordinating with other agencies concerned with youth, were asked in the first two pages of the questionnaire. Questions in the later sections were devoted primarily to issues in expanding adult programs, but some youth-related programs included the exchange of work between county staff members, and the use of specialists.

#### THE ANALYSIS

Since the main purpose of this special report is to help in county 4-H program planning, the data for counties are most important. These data are presented in the appendix. Each county leader's response is given equal weight in the computation of percentages in each attitude column. The inclusion of commissioners who are not presently on the Extension Committee is based on the rationale that the total Board of Commissioners must approve the budget and, indirectly, the general program of Extension.

6

The state totals, discussed in the text of this special report, are intended as general perspectives on the attitudes of county leaders in Minnesota. These totals should allow a comparative basis for defining directions in program planning at the county level, as well as providing a background for statewide considerations.

The findings do not represent a final vote on 4-H expansion. The questionnaire was sent out in the winter of 1968 before many of these proposals had been discussed by the county leaders. Findings are intended to serve as a basis for discussion in county planning.

The significance of opposition is of utmost importance in interpreting findings. Extension personnel are strongly encouraged in training and in the actual operation of the organization to work on consensus in program development, rather than on simple majority vote. The authors of this special report considered an opposition of 20 percent or more to any expansion proposal, of social significance in the county, warranting much discussion before a proposal is adopted. A full discussion of this is presented in the previous special report of this study.\*

#### THE FINDINGS

In the following pages, the attitudes of county leaders toward various proposals for expansion in the 4-H program are reported statewide. Corresponding tables for the individual counties are in the appendix.

#### THE CONTENT OF SHORT TERM PROJECTS

Fourteen attitude questions were used on the first regular page of the questionnaire to elicit attitudes toward the content for short term projects. Five of the questions deal with traditional project areas where the only change involved is the method of teaching: especially the length of time the project is conducted. Another five questions deal with special interest group program areas, some of which have been included in regular yearlong programs and others not. These are essentially skill projects. The remaining four areas relate more directly to human relations and human development.

#### TRADITIONAL PROGRAM AREAS

The county leaders were asked to express attitudes toward the inclusion of grain crops among the short term projects in expanded youth programs. The examples used in the questionnaire were corn, soybeans, and small grain. These examples represent traditional 4-H projects. Corn was the first Minnesota 4-H project. Soybeans, of more recent economic importance, is

\*Duane A. Wilson, Howard J. Newell, and Charles E. Ramsey, "Attitudes of County Leaders Toward Expanded Adult Programs in Extension," Special Report 31, University of Minnesota Agricultural Extension Service, 1969.

the subject of a regular project which follows the traditional 4-li project format. The basic requirements for the grain crops projects include growing 1 acre or more of a crop and keeping a complete record from seedbed preparation through harvest and sale.

In responding to the question of including grain crops as short term projects, the attitudes of the county leaders could be influenced in different ways. A desire to maintain the traditional program and to reach only rural young people could produce a negative response. A negative response might also result from a feeling that projects in this area should provide a learning experience which would encourage young people to remain on the farm and that the yearlong requirement would be needed to accomplish this. A favorable attitude of some county leaders might be influenced by a broader view of expanded educational programs taken by county leaders who are more closely aligned with the urban population or who might feel that a larger clientele should be

A second traditional program area proposed as a short term project is the study of livestock. The examples given for this project were beef, dairy, and swine--traditional projects in the Minnesota 4-H youth program. Its objectives are to teach boys and girls to become successful livestock producers and to increase livestock production in the state. The basic requirements for the project are to own and raise one or more head of livestock and to keep a complete record of the project. The project length varies from 3 months for one phase of the swine project to 1 year for dairy and beef. These projects receive strong support from the livestock industry and many awards are available for participants.

The close relationship of many of the county leaders to the livestock industry could influence the response to the question of including the study of livestock in a short term project. Some may feel the importance of this industry to the economy of the state would be downgraded by a change in the 4-H projects. Some might find it difficult to see how livestock projects could be developed into short term projects if a person is to own and raise an animal. Those expressing an affirmative attitude could be influenced by a desire to reach a larger clientele and to provide a learning experience for boys and girls who may never farm or who do not live on a farm. A favorable response could also come from those who feel that Extension could provide a valuable learning experience for young people without the need to own or raise an

The county leaders were also asked to express attitudes toward including homemaking skills as short term projects in expanded youth programs. The examples given for these projects were cooking, sewing, and home management—all part of the very early development of the 4-H youth program. The basic objective in the homemaking skills area is to teach preservation and preparation of foods produced on the farm, making of clothing, and management of the home.

5

The fact that this was the first project area with participation by urban young people may influence the attitude of the county leaders. Early records show that the majority of urban or nonfarm youth participating in these 4-H programs were girls. County leaders whose attitude was negative in the first two questions might be more inclined to be neutral or even to give an affirmative response toward including these projects in a short term program. A negative response could result from the feeling that the primary emphasis in 4-H should be returned to the rural young person.

County leaders were asked to express attitudes toward including plants as short term projects in expanding youth programs. Examples used to describe projects of this type were landscaping and gardening. These have been a part of the 4-H program many years, but have changed from the basic objective of producing food for the farm kitchen and providing better surroundings for the farm home. Many boys and girls can participate in these projects. The increased enrollment during World War II, especially in the victory garden project, and the failure to maintain this enrollment could influence the response of some county leaders familiar with this situation.

County leaders were asked to express attitudes toward including manual skills, such as electronics, mechanics, and shop, as short term projects in expanded youth programs. The general purposes of the projects are to provide a learning experience for young people in caring for and understanding use of tools common to the farm and home shop, understanding electricity and its use, and making articles common to the farm and home. These projects require a record and report of work done, similar to all regular 4-H Club projects. It is also possible for the members to have an exhibit for the county fair or achievement day.

Records are often not required for short term projects, and often short term project members do not exhibit at the county fair or achievement day. County leaders could be influenced to have a negative attitude where they felt strongly toward records and exhibiting. The fact that all young people could participate in these short term projects could also influence the response. There has been greater participation in these projects by urban young people than in the agricultural projects employing traditional methods. This could influence some county leaders. In other words, responses to including traditional project topics in short term projects could be influenced as much by the resistance to change in method and clientele as to the time change for traditional projects.

The data of this study show there is extremely little opposition, among county leaders of the state, to the inclusion of the traditional areas of the 4-H program in the short term projects (see table 1). If only the attitudes of county leaders were considered in this proposal for expansion, the introduction of short term projects in traditional areas could proceed in most counties with little further discussion.

There are some interesting patterns in the county data, however, (see table 1A in the appendix) many counties in the Northeast district have a significant opposition to the inclusion of grain crops as short term projects. In all other districts, only a very few counties expressed significant opposition--but in those few, it was very heavy opposition.

There was dramatic response in the counties to including homemaking skills as short term projects. In only one county were more than 15 percent of the counties' leaders opposed. Few proposals in the entire questionnaire received such universal acceptance.

Opposition to including plants and livestock as short term projects was much more scattered and a large percentage of county leaders were neutral. There was generally favorable statewide response to these traditional projects.

#### SPECIAL INTEREST GROUP PROGRAM AREAS

The county leaders were asked to express their attitudes toward including outdoor projects, such as cooking, day camps, nature hikes, and hunting. These examples are parts or phases of regular 4-H projects or activities with member participation. Each of the examples listed as short term projects, with the exception of hunting, was carried out as part of the pilot project, 4-H Operation Expansion. They were developed to provide a learning experience for all interested young people and could be available to regular 4-H members or to those participating only in short term projects.

A second topic was including the study of animals, other than livestock, as short term projects in expanded youth programs. Examples for this project were dogs, rabbits, and horses, all regular 4-H projects, with the dog project the newest and the rabbit project part of the program for over 25 years. A horse project, one of the earlier ones, was dropped after the tractor replaced the horse as the power unit on farms. The horse project was redeveloped in the mid-fifties when statewide interest increased in pleasure horses.

County leaders were also asked to express attitudes toward the inclusion of short term projects on safety as part of expanded youth programs. The examples used were water safety, guns, bicycles, and automobiles. Safety education has been carried out as a part of the Extension 4-H youth program in the 4-H Safety and Fire Prevention Project and is a part or phase of many other projects. These examples also lend themselves to short instructional periods and support the activities of special interest groups.

County leaders were asked to express attitudes toward the inclusion of hobby-type special interests as short term projects in expanded youth programs. The examples of special interest projects given in the questionnaire were photography,

painting pictures, and crafts. Photography has been included as a regular 4-H project for a number of years and painting and crafts have long been considered Extension activities in some states. Participation in these programs was usually conducted as part of a 4-H camp or other 4-H special event. These groups could be made up of members participating in the regular 4-H program or they might be individuals who do not belong to a 4-H Club or who are not involved in one of the regular projects.

The county leaders were asked to express attitudes toward inclusion of earning skills as short term projects in expanded youth programs. The examples used, babysitting, part-time jobs, summer jobs, are a departure from traditional 4-H projects and are more closely aligned with those commonly accepted as possible short term projects. As indicated earlier, short term projects of this nature were developed in each of the counties involved in the pilot project, 4-H Operation Expansion. Such topics are not new to 4-H programs since they have been a part of other projects.

There is a wide range of underlying attitudes that might influence the response to these special interest group areas. A favorable response to the development of short term projects could come from the feeling that most of these special interests more nearly correspond to the needs of nonfarm youth than do the more traditional projects. The favorable response could also be due more to the desire for new audiences than for new content. A second underlying attitude which could bring a favorable response is the feeling that these special interest group areas even meet the needs of farm children since so many of them do not become farmers -- thus a futuristic attitude. Still a third underlying attitude eliciting a favorable response could be the feeling that hobby interests are legitimate content for youth programs, possibly based on the old fears of "idle hands." However, negative response also could be based on the definition of these special interest group areas as "play," thus not warranting a tax-sponsored program. Another definition leading to negative responses would be the feeling that most, if not all, of these special interest activities are not socializing the youth into the productive economic system. There are features of some of the questions which might produce results unique to that question, such as the wide range of "other animals" listed as examples. A person might easily respond to a particular example which he or she likes or dislikes, rather than to the general idea of short term projects on animals other than livestock.

Responses of county leaders to the inclusion of special interest group projects in the short term project program is, on the whole, favorable, but less so than in the traditional areas (see table 1). A significant opposition is found in two of the proposed areas: those concerned with animals other than livestock, and what is termed special interests--photography, painting pictures, and crafts. Even in these two latter areas, however, there was general approval in many counties (see table 1B).

There is much more predominance of neutral responses to some of the special interest group areas than to the traditional projects. Only safety projects receive heavy support, indeed heavier than any of the traditional areas.

#### HUMAN DEVELOPMENT AREA

The choice of human development program areas is especially problematic. The rapidly increasing orientation towards human relations in American culture appears in practically every institution. Churches are sponsoring sociological and economic workshops for ministers and are increasing learning experiences not directly concerned with man's relation to God but more with man's relation to man. The economic institution has moved toward a human relations orientation in providing contracts for fringe benefits, in devoting high level offices to community relations, and in devoting increasing proportions of research and development efforts to human relations within the industry. In government, there is an increasing proportion of legislation and executive personnel devoted to human relations problems, such as civil rights. Public schools have sociology and psychology courses, as well as an increased number of counselors. The number of college sociology and psychology majors is increasing.

All this points to the direction of the major culture theme in American society as human relations oriented. However, the small community and the farm segment of the population show some evidence of resisting or being bypassed by the system.

County leaders were asked to express attitudes toward the inclusion of understanding adults as short term projects in expanded youth programs. Examples for this program area were youth relations with parents and teachers. This question and the following three have an orientation toward human relations and human development. The examples given for this question represent a part of a series of educational meetings held for teenagers in a number of counties. They have never been considered as projects requiring a record or a lengthy participation in the program. County leaders' attitudes could be influenced by the fact that these projects are for teenagers only, and some county leaders might feel 4-H should be mainly for the 9-12 age group. Some county leaders could also feel that these educational programs are the responsibility of others, such as the school, the church, or the family.

County leaders were asked to express attitudes toward the inclusion of personal development as short term projects in expanded youth programs. The examples used were citizenship, leadership, and career choice, all having a closer relationship to the regular 4-H program than other proposed areas in human development. Citizenship short courses have been conducted by Extension; a junior leadership program has been available to members for many years, and Extension staff has carried out programs on career choice. Each of the examples given lends itself to educational programs of

short duration and could be appealing to the teenage group. They could also interest rural, rural nonfarm, and urban teenagers. County leaders could view these short term projects as good for all teenagers--resulting in an affirmative response. Negative responses could come from the general feeling that such topics are inappropriate for 4-H short term projects either because such topics are best left unstudied, because they belong to other institutions, or because they belong in yearlong projects.

Another topic related to human relations and human development is self-understanding. In designing this question, it was assumed that selfunderstanding is greatly enhanced by self-acceptance, which in turn can start in projects on grooming and clothes selection. Again, these examples are closely related to phases of the Extension 4-H program. For example, educational programs on good grooming were made available to club members some years ago, and a contest was held. Selection of clothes was part of the good grooming program and the clothing project. County leaders might view this in a number of ways which would influence their attitudes toward these short term projects. It is possible some might feel that this should remain a part of the traditional and ongoing program and that it should be available only to those who participate as regular 4-H members. Others might feel this educational program should be made available to all teenagers in a community -- thus their attitude would be in the affirmative.

County leaders were asked to express their attitude toward including preparing for marriage as short term projects in expanded youth programs. Examples used in the questionnaire were dating and teenage marriage which lend themselves to educational programs which can be carried out over a short time, require no record, and have a limited possibility of any type of exhibit at the end of the program. The attitudes of county leaders could be influenced by their feelings of Extension's responsibility in providing these programs for teenagers. In this question, as well as the preceding three questions, county leaders might be influenced by their feelings toward expansion of the Extension youth program to include a larger number of interested young people or whether to limit it only to those participating in the regular 4-H program.

The data show that the response of the county leaders to including human development areas in short term projects is, in general, favorable (see table 1). There was significant opposition only in the area of preparing for marriage where fewer than half of the county leaders were actively favorable.

In no county was personal development as a short term project opposed by as many as 20 percent of the county leaders. However; there were a few counties with 16 or 17 percent opposition, and it would appear that agents should discuss the proposal with county leaders in these counties before these projects are attempted.

Table 1. One way to expand is through short term projects, in which youth meet on a special topic for only a few meetings. These meetings may be discussions, work shops, or projects. If short term projects become a part of the Extension youth program, which ones, if any, should be offered in your county?

Subject for short term project	Yes	Neutral	No
Traditional subjects			
Grain crops (corn, soybeans, and small grain)	61.0 75.7 76.0 40.8	32.0 20.6 21.2 49.7	7.0 3.7 2.8 9.5
Special interest subjects			
Outdoor projects (cooking, day camps, nature hikes, hunting)	50.9	40.6 54.3 13.2 37.9 56.2 41.7	12.0 28.0 4.7 11.2 20.6 9.2
Human development and relations			
Understanding adults (relations with parents, teachers)	67.8 78.5 52.5 46.8	24.5 17.9 38.3 36.6	7.7 3.6 9.2 16.6

In all other areas of human development programs, there was significant opposition in some counties, and this was not concentrated in any one district of the state.

The human development areas in the questionnaire were indicated <u>for teenagers only</u>. The subjects listed as examples are generally much more appropriate for teens than for younger children. Greater emphasis would probably aid in recruiting new teenage members and would encourage teenage members to remain in 4-H. (See county data in tables 1A, 1B, and 1C in the appendix.)

#### METHODS IN THE SHORT TERM PROJECT

Traditionally, certain methods have been central to the 4-H movement, including exhibiting at the county fair, awarding ribbons to differentiate degrees of excellence, completing project records and awarding scholarships. These methods appear to be strongly favored by many parents of 4-H members, as well as by members themselves. Agents report many difficulties with awards, but still seem to support the idea strongly.

Some students of the socialization process have criticized these methods saying that competition is not as wholesome an educational motivator as cooperation, and that awards make the satisfaction in learning extrinsic rather than intrinsic. There are, internationally, 4-H organizations which do not use the award system.

The problematic nature of associating the usual methods with short term projects flows not only from the nature of the disagreement men-

tioned but also from certain practical difficulties. Many of the short term projects do not adapt easily to exhibiting or awards. Some of these projects last too short a time to develop artifacts worthy of exhibiting; while others simply have no artifacts associated with the project, as in discussion sessions on youth relating to adults.

If exhibiting and awarding prizes are impossible in some short term projects, this raises the question of whether the methods should be used in any. The county leaders were asked to check their attitude toward some of these methods as they relate to the short term project.

In considering the traditional methods listed in table 2 as appropriate for short term projects, there was little opposition to and a heavily favored response for competition at the fair, giving awards for excellence, and keeping project records. Opposition reached a socially significant level only in a few counties. As mentioned earlier, some of the areas listed on the questionnaire as potentially appropriate for short term projects would not lend themselves to any of these three methods. However, where applicable, it appears that county leaders highly favor introducing those methods.

There was some opposition to considering the participants in short term projects as 4-H members. This opposition was socially significant in a very large number of counties.

There was relatively heavy opposition to the idea of allowing short term project members to compete with regular members for trips and scholarships. This opposition was relatively uniform throughout the state. (See the county data in table 2A in the appendix.)

Table 2. In these short term projects, some things we have been doing with regular clubs have come into question. Which of these do you think we should use with short term projects?

For use with short term projects	Yes	Neutral	No
Exhibit and compete at county fair	69.7	22.6	7.7
Recognition at regular achievement or awards program	66.0	28.9	5.1
Require keeping and completing records	76.0	19.4	4.6
Consider them 4-H members	35.7	41.8	22.5
Allow competition with regular 4-H members for trips and awards	41.8	29.2	29.0

#### NEW CLIENTELE FOR 4-H

The proposal to expand the clientele of 4-H has been discussed many years. This proposal takes, essentially, three forms. One suggestion has been to give greater emphasis to the teenage program. Teenagers for many years were limited primarily to taking an ever-expanding list of the traditional projects, more advanced projects in the same subject, or the junior leadership project. The dropout of 4-H members at the beginning of the teen years has always been noticeable and it was thought that new subjects, for example, career explorations, might better serve the needs of the teenager.

Another proposal to expand the clientele of 4-H has been to seek a larger membership among nonfarm youth. The extension of 4-H to the village and city population is an accomplished fact in many counties, to the extent that some of the largest single club and county enrollments now exist in large metropolitan centers. The expansion to town and city population often has involved changes in content. Two projects which have elicited much interest among the urban youth are the bicycle club and the horse project.

Still a third form the expansion proposal has taken has been to lower the minimum age for 4-H from 9, to 7- or 8-year-olds. The proposal is

more recent and has had small support to date. There is much less experience to predict the consequences of such a change than with greater emphasis on teenagers and nonfarm youth population. It could be argued, however, that a much larger share of the methods and content of the traditional 4-H program is appropriate to the 7- and 8-year-old than to the teenage population whether rural or urban.

In considering the attitudes of county leaders toward the three dimensions of expansion in new clientele, the findings are very clear (see table 3). The residence dimension does not seem to make any difference to county leaders, for, given the same age groups, the percentage checking village and city as an area for expansion is almost identical to the percentage checking rural.

The age dimension is the discriminating factor in the responses. Almost three-fourths of the county leaders favor a greater emphasis in reaching more teenagers; furthermore, this has little opposition. Less favorably viewed, but still with over half the county leaders favorable, is expanding numbers in the age 9 to 12 group. Again, the opposition is small in most counties.

However, there were few questions in the entire study which received as high a percentage of unfavorable response as lowering the age limit to include children 7 and 8. Nearly half of the county leaders opposed this type of expansion. Further, among the remaining half, three times as many were neutral as favored this type of expansion.

In considering only the present attitudes of county leaders toward increasing the number of clientele for 4-H, it might be said that expansion in the teenage population is strongly favored in most counties, expansion in the number of 7- and 8-year-olds is definitely viewed unfavorably in most counties, and expansion by reaching more 9-to 12-year-olds is generally favored.

There is no particular reason why 4-H should be the same in every county. In some counties, even lowering the age limit for 4-H membership is viewed favorably. (See table 3A in the appendix.)

#### COOPERATION WITH OTHER YOUTH AGENCIES

In any community, there is a wide array of organizations devoted wholly or partly to youth.

Many of these programs have certain aspects which doubtless have overlapping aims, content, and clientele. The mere fact that a young person gets the same learning opportunity from two different agencies is not inherently undesirable. Some factor may prevent him from learning in one organization, but not in another. Indeed, such "double exposure" may be advantageous in developing his ability to discriminate between differing values. Nevertheless, many people believe such overlapping should be planned if it is allowed to exist at all. Therefore, the coordination and cooperation among youth organizations is open to debate.

Another problem is the necessity for leaders of youth organizations to know what gaps in needed learning experience exist among the organizations -- are there important youth problems which no organizations treat?

When organizations cooperate, there is always the danger that weaker organizations will be swallowed by strong ones, and that the program of the smaller organization will become simply a residual or supplement to that of the larger. Cooperation among agencies depends largely on personalities of the leaders, attitudes of those in one organization toward the other, and relative availability of funds.

There is strong opposition to expansion by cooperation of 4-H with most other organizations if this cooperation takes a significant proportion of the agents' time (see table 4). This opposition is spread fairly uniformly throughout the counties (see table 4A in the appendix).

However, greater cooperation with the youth programs in farm organizations and in the agencies which are part of the program of the Department of Agriculture received little opposition. Indeed, about three-fourths of the county leaders expressed favorable attitudes toward having the agent spend much time with these organizations.

The opposition to extended work with schools, churches, scouts, and to a somewhat lesser degree, civic organizations, was very heavy in some counties, and quite heavy statewide. It may be surmised that these organizations are thought to have their own professional help in youth programs, and thus the already over-extended agents should concentrate on programs where such additional professional help is not available.

Table 3. If youth work is expanded in your county who do you think we should aim at?

Groups to include	Yes	Neutral	No
Rural youth, age 9 through 12	55, 0	33.3	11.7
Village or urban youth, age 9 through 12	58.4	32.7	8.9
Rural teenagers	71.5	23.8	4.7
Village or urban teenagers	72.1	23.9	4.0
Youth, age 7 and 8	13.1	39.2	47.7

Table 4. Should the agents in your county devote much time to working with the following?

Suggested groups	Yes	Neutral	No
Schools	27.4	39.1	33. 4
Church youth groups	15.2	44.7	40.1
Scouts and Campfire Girls		46.3	35.7
Future Farmers and Future Homemakers	74.2	17.8	8.0
Youth programs in farm organizations	72.7	19.3	8. 0
Youth programs in civic organizations (such as Legion, Rotary)		43.0	21. 9

#### EXCHANGING WORK BETWEEN AGENTS

Another means of expanding programs in work with youth is through the exchange of work between staff members of nearby counties. This exchange is based on the assumption that agents have different specialties, depending upon training and experience. Specialization suggests that agents could prepare more effective programs if they were not completely tied to counties but rather to areas of program development.

Suppose the agent in County A has most of his training and experience in livestock programs. In nearby County B, another agent has most of his training and experience in grain crop programs. The idea of the exchange of work would permit the agent from County A to conduct educational programs in livestock in County B, while the agent from County B would conduct educational programs on grain crops in County A. Their other responsibilities as county agent would remain the same.

Table Do you feel that agents in your county should spend much time exchanging work (with agents from other counties) in the youth program?

Yes	60.5 percent
Neutral	28.2 percent
No	11.3 percent

The attitude toward the exchange of work in the youth program is highly favored by county leaders. Statewide, well over half favored exchange, and only about 10 percent were opposed (see table 5).

There is little opposition in most of the counties toward the exchange of work (see table 5A in the appendix).

# SHOULD YOUTH WORK BE EXPANDED: A SUMMARY ATTITUDE

All of the preceding questions as sume that some expansion will take place in youth work. If such expansion takes place, the county leaders have an earlier than usual determination of the direction this expansion should take because of this study. However, this still leaves the question of whether expansion should be attempted at all.

The pattern across the state found over half of the county leaders actively favoring expanding the youth program (see table 6). In a few counties, there was significant opposition (see table 6A in the appendix).

Table 6. Should the youth program in your county be increased?

Yes	58.2 percent
Neutral	34.6 percent
No	7.2 percent
